BOOK ROOM REPORT 2019

A book room was something of a need at Rotuma High School. All textbooks used to be stored at the resource room in the main administration block and when books are issued the librarian has to walk across the main school ground to issue these books. Books are stored with other office materials making the resource room quite congested.

Thus in June this year the construction of a book room next to the library began. The site selected is shown in the pictures below and this is within the library vicinity.

Construction took six weeks. The book room work also included the electrical improvements . It was initially planned to install a ceiling fan in it as well but because it was airy enough this was not done thus its ceiling fan will be installed in the Principal's office later. The main challenge was that electricity power was not consistent thus a lot of things had to be done manually. However apart from completion of the book room, 4 ceiling fans were installed [2 in the conference room, 1 in the main office and 1 in the IT lab]. A big cupboard for the resource room was also constructed from the remaining materials.
